

Compaq Wireless Enterprise Framework pilot solution

Wireless Connectivity to Enterprise Applications

Wireless access made easy

Compaq Wireless Enterprise Framework is designed as an end-to-end solution that allows you to extend your company's enterprise applications to your mobile workforce. Compaq provides a one-stop shop for mobility solutions designed to include the best-in-class technologies. As part of a complete vision and strategy for your wireless and mobile solutions, it includes easy development, customization, and deployment—at a fixed price in a fixed timeframe.

Included in the Compaq Wireless Enterprise Framework are all the necessary servers, access devices, software, and professional support services to wirelessly extend Oracle, Siebel, and SAP enterprise applications, as well as Microsoft® Exchange and Microsoft Outlook, to your workforce. The solution consists of a Multiple Application Connectivity Solution with technology provided by Shipcom Wireless™ and a Mobile Messaging solution with technology provided by Infowave Technology™.

Compaq Wireless Enterprise Framework pilot solution consists of the following:

Multiple Application Connectivity Solution:

- > *Compaq ProLiant DL580 Enterprise Server*
 - >> *Four processors*
 - >> *4 GB RAM*
 - >> *Four 18.1 GB hard drives and RAID Controller*
- > *Shipcom Technology software*
 - >> *Rapid Development software*
 - >> *Siebel, SAP, Oracle connectors*
 - >> *50 user licenses*
- > *Access devices*
 - >> *50 iPAQ PocketPCs*
 - >>> *Option jackets*
 - >>> *Wireless cards*
- > *Compaq Services*
 - >> *Professional services*
 - >> *Installation and configuration services*
 - >> *Training*
 - >> *Hardware and software support services*
 - >> *Choice of six transactions (two posting and four inquiring) specifically selected for your workforce*

Mobile Messaging Solution:

- > *Two ProLiant DL360 Enterprise Servers*
 - >> *One processor*
 - >> *512 MB RAM*
 - >> *18.1 GB hard drive*
- > *Infowave software*
 - >> *Wireless Business Engine*
 - >> *Exchange and Web connectors*
 - >> *50 user licenses*
- > *Compaq Services*
 - >> *Professional services*
 - >> *Installation and configuration services*
 - >> *Hardware and software support services*

Compaq Wireless Enterprise Framework pilot solution

At a cost considerably lower than many solutions, Compaq Wireless Enterprise Framework includes the following benefits to help you achieve wireless business success:

- > Complete vision and strategy
- > Fixed-scope, fixed-cost pilot solution
- > Rapid development, customization, and deployment
- > Quick return on investment
- > Multiple application capacity
- > Proven security
- > The ability to provide critical enterprise real-time information

Strategy for a quick ROI

The Compaq Wireless Enterprise Framework pilot bundle can quickly help you determine the return on investment (ROI) for your wireless project and ensure that your wireless and mobility initiatives are aligned to your business objectives. To achieve these goals, Compaq can also provide the following services to help you evaluate the current environment for wireless implementation and its operational lifecycle:

- > **Art of the Possible Mobility Strategy Service** to assess your wireless landscape and technology requirements, as well as recommended next steps
- > **Mobility Architecture Services** to help you develop an appropriate infrastructure architecture that is aligned with your business goals and drivers
- > **Mobility & Wireless Assessment Services** to determine the readiness of your applications and infrastructure to support mobile solutions
- > **Mobility Design & Implementation Services** to design and deploy enterprisewide mobility solutions
- > **Managed Mobility Pilot Services** to provide quick deployment of an end-to-end wireless solution with the convenience of per-user pricing

- > **Managed Mobility Services** to provide an end-to-end managed wireless service, including applications, server and network management, security, and end-user support—all integrated and priced per user
- > **Business-Critical Support Services** to ensure smooth 24/7 operation of wireless applications and infrastructure

Proven security for your wireless environment

Compaq Wireless Enterprise Framework can give you secure authentication, authorization, and encryption of data to enterprise applications and mobile users. Current user login and application rights are extended for mobility without adding additional burdens to the inherent security systems of the enterprise.

Residing behind your corporate firewall, Compaq Wireless Enterprise Framework takes advantage of the same enterprise security policies and procedures for remote connectivity you may already have in place. Compaq access devices support industry-accepted standards for remote access by using the Secure Socket Layer (SSL) for intranet Web access with 128-bit Triple DES encryption, with the ability to handle digital

certificates through public key infrastructure and IPSEC with 128-bit Triple DES encryption for remote VPN connectivity. The Mobile Messaging solution with Infowave also adds the Certicom ECC 168-bit VPN client as an additional means for secure connections.

The Compaq team also can help you secure your Compaq hardware using encryption software and biometric add-on devices to prevent access to sensitive data if the hardware is lost or stolen.

Let your workforce go wireless

Compaq Wireless Enterprise Framework provides you with an affordable environment that is easily implemented, can be customized specifically for your users, and can enable future growth of your environment. It also can help you reduce costs and improve your bottom line, all from a single point of accountability.

For more information on how Compaq Wireless Enterprise Framework can integrate your mobile workforce with your priority applications, deliver a fast ROI, and maintain security with one fixed-price solution, contact your Compaq representative today, or visit www.compaq.com/mobility and click on “What is Mobility?” and then “Today’s Solutions.”
