

# ASSET AND MATERIAL MANAGEMENT

Late one evening at a pump station northwest of Lagos, Nigeria, an operator walked from his office for a visual inspection of the pipeline manifolds currently in operation. A normal walk-around turned out to be anything but normal when he discovered a leaking valve on the discharge side of the pump currently in use moving crude to the Lagos port. He immediately began the emergency procedures required for shutting down the station and diverting flow from the pipeline into the limited storage facilities that were available. But the all-important next step was locating the parts necessary for repair, and getting them in a timely matter. After several calls and extensive searching with maintenance personnel, he discovered there were two locations from where he could obtain the part. But how long will his operation be down for him to acquire this replacement part?

- ***Improve product location time – Where is it?***
- ***Increase efficiency of product transportation***
- ***99.9% reassurance in the accuracy of product location***

With highly valued and critical equipment needed on very short notice, asset visibility and management in multiple locations remains a paramount concern to all sectors of the oil and gas industry. With the use of Auto-ID technology, his task would have been quick and easy with real time asset visibility. SHIPCOM can help ensure that you have the fastest access to ensure optimum utilization of expensive capital equipment. Let us show you how to avoid costly downtime and delays by using asset tracking and visibility technology, and how to make such dilemmas end quickly to everyone's satisfaction
