- ◇ Integration with Apple Health and Google Fit, 2019-SARS-CoV-2 testing kits.
- ◇ Backend platform on ServiceNow.

Tele-Medicine

One button telemedicine for
doctor – patient management
of quarantined patients.

Case Study

When Dr. Sharma's Medical Practice in Northern Virginia turned their practice into Telemedicine:

- ◇ Patients got a text message on their mobile phones to download the Health Wizz mobile app.
- ◇ On the mobile app, patients were directed to complete four steps in preparation for the video session, including scheduling the session with Dr. Sharma.
- ◇ As part of the preparation, patients were requested to give their consent for the Telemedicine option and aggregate any medical records they might need during the consultation.
- ◇ Patients and medical practice staff got a reminder notification of the upcoming video session.
- ◇ Patients were able to click on the reminder and join the secure video session with a personalized meeting ID.
- ◇ Neither the patient nor staff wasted time in fiddling with a microphone or speaker of the laptop, since the whole session was conducted on the patient's mobile phone.
